

they have been able to accumulate more than \$3 million. How did they do it? Their wealth development strategy is worth detailing.

MILLIONAIRES WHO ARE USED VEHICLE-PRONE SHOPPERS

What factors explain variations in wealth accumulation? Income is a factor. People with higher incomes are expected to have higher levels of wealth. But note again that members of this group of used-vehicle buyers have a significantly lower income than the average for the other groups of millionaires. About two-thirds have incomes in the high-five-or low-six-figure range.

Occupation is another factor. We have noted many times that entrepreneurs account for a disproportionately large share of the millionaires in America. Conversely, most of the other high-income-producing occupations contain disproportionately smaller portions of high-net worth types. These include physicians, corporate middle managers, executives, dentists, accountants, attorneys, engineers, architects, high-income-producing civil servants, and professors. But there are exceptions. For example, each of these nonentrepreneurial occupations is represented in the used vehicle-prone shopper group we are profiling.

Used vehicle-prone shoppers are unique even among their millionaire cohorts. Note that, on average, they have the highest score values on all seven measures of frugality (see [Table 4-4](#)).
