

The need for immigration-related legal expertise is not limited to foreigners who are affluent entrepreneurs. Many highly skilled professionals and scientific workers are being sought in growing numbers by American corporations. These employees have an increasing need for the services of attorneys who have considerable expertise and experience with immigration statutes.

MEDICAL AND DENTAL CARE SPECIALISTS

Many specialists will benefit from the enormous number of dollars that the affluent population will spend for health care in the next decade. A growing number of wealthy people will pay for the medical and dental expenses of their adult children and grandchildren. Currently, more than four in ten millionaires (44 percent) are paying or have paid for the medical/dental expenses of their adult offspring and/or grandchildren. We estimate that in the next ten years, millionaires will spend in excess of \$52 billion for the medical and dental care of their adult children and grandchildren.

Most of these medical and dental expenses are not covered by health-care insurance programs. Skilled health-care specialists who prefer to deal directly with individual payers and not with bureaucratic third-party organizations will be especially important in providing these uncovered services. A growing number of health-care professionals are already focusing on this affluent self-payer market. Those professionals with the highest skills and corresponding reputations can most readily capitalize on this trend. Often they can demand and receive fees that are higher than any insurance company would be willing to pay. The affluent will often pay directly to the health-care professional or organization. This way they avoid the possibility of paying gift tax on such distributions. Also, many affluent people will pay for their own “elective” health-care services.

Specialists who will benefit include:

◆ **Dentists** providing cosmetic dentistry, including bleaching, bonding, veneers, invisible braces, cosmetic nasal surgery, and chin and corrective jaw surgery
