

within the limits of the four most general rules of common-stock selection suggested for the defensive investor (on pp. 114–115) there is room for a rather considerable freedom of preference. At the worst the indulgence of such preferences should do no harm; beyond that, it may add something worthwhile to the results. With the increasing impact of technological developments on long-term corporate results, the investor cannot leave them out of his calculations. Here, as elsewhere, he must seek a mean between neglect and overemphasis.
