^a High and low both in 1970.

^b 1959 to 1960.

In Table 18-9 we provide some data on the price fluctuations of the issues covered in this chapter. Most of them had large declines between 1961 and 1962, as well as from 1969 to 1970. Clearly the investor must be prepared for this type of adverse market movement in future stock markets. In Table 18-10 we show year-to-year fluctuations of McGraw-Hill common stock for the period 1958-1970. It will be noted that in each of the last 13 years the price either advanced or declined over a range of at least three to two from one year to the next. (In the case of National General fluctuations of at least this amplitude both upward and downward were shown in each two-year period.)
