

Don't want to get involved in real estate? No problem. Rental systems aren't just reserved for real estate. Rental systems can come from a variety of other sources not real estate oriented. Leases, royalty payments, and licensing are other forms of "rental systems" that can produce reoccurring monthly income. For example, when you own the rights to a music collection, corporations have to pay you a royalty to use the music. The work might have been recorded decades earlier, but it still generates royalties.

Likewise, if you invent and patent a product process and license it to other companies, you again earn income from the licensing fee. The patent was invented and registered, yet its income survives time exclusive of your time. Photographers can earn licensing revenues by allowing others to use their photos. Cartoonists license their artistry to book authors and newspaper producers. The creation of a cartoon might have happened years ago, yet, it survives time and generates rental income for the owner. Rental systems are powerful money trees because they are high on the passivity scale and survive time.

Seedling 2: Computer/Software Systems (Passivity Grade: A-)

My preferred system is computer and software systems, including the Internet. It's no shock that the Internet has paved the road to millions more than any other road out there. In fact, I heard a statistic that the Internet created more millionaires in the last five years than the previous five decades combined. What makes the Internet and computer systems so potent?

Computers are miraculous inventions and fertile seeds to money trees. They work 24 hours a day, 7 days a week, and they don't bitch about working conditions. They don't bitch that you don't pay them enough. They don't bitch and moan about co-workers like Lazy Joan or Same-Shirt Bob. Nope, computers aren't late, they don't ask for pay raises, and they don't care you just bought a new Mercedes S-Class. Nope, they just do what they're programmed to do and it's done.

What sets the Internet apart from real estate is it implicitly contains leverage. When you own a Web site, you're accessible to millions. When you own a three-bedroom home on Elm Street, it's accessible to a few. This duality makes Internet systems one of the best business seedlings in existence.

Additionally, computer systems aren't limited to the Internet. It could be software or applications. Some of the richest people on the planet are software billionaires, like Bill Gates of Microsoft and Larry Ellison of Oracle. Software enjoys plump margins because it is easily replicated. Once the code is written, it's done. You can easily sell one or 10,000. Can you replicate an office building with ease? You can't.

Software millionaires can be "average Joes." Facebook and iPhone application developers are making money fast. One iPhone developer, Nicholas, raked in \$600,000 in a single month with a single iPhone game. In a phone interview,
