

Behind my drunken passion, I ran through my WCCA analysis. What is the worse case outcome of this choice?

- 1) I could get a sexually transmitted disease.
- 2) I could get her pregnant and be locked to this person for the rest of my life.
- 3) I could be falsely accused of rape.

What is the probability of these outcomes?

- 1) STD: 10% (based on her outward promiscuity!)
- 2) Pregnancy: 1%.
- 3) Falsely accused: 0.5%.

Is this an acceptable risk? I immediately reasoned HELL NO. The 10% or the 1%—I reasoned the risk was too great and that risk had outcomes that could change my life FOREVER. I denied the woman's advances and hid my lust in favor of a better choice. What if I hadn't? Sure, I would have enjoyed a quick romp of fun, but what about afterward? Would I be put in a position of an unplanned pregnancy with a woman I didn't know? Would I be condemned with a disease that would jeopardize my health and limit my search for a future partner? The potential consequences of this action had profound treasonous trajectories that I avoided.

WCCA comes into play when I drive. Viper, Lamborghini, doesn't matter—other idiot drivers looking for a street race constantly berate me. Sure, I might hit the accelerator hard for three seconds, but in those three seconds, WCCA takes over. What's the worst that could happen? I could kill myself and someone else. Odds? 3%? Knowing my racing competency, the risks are dangerously high. I release the accelerator and don't engage. The other driver? He speeds away with something to prove and in disregard to the potential outcomes. That's OK, maybe there's a reason he's driving a ten-year-old fart-can Honda and I'm in the Lamborghini. Win the street race—I'll win life.

THE WEIGHTED AVERAGE DECISION MATRIX (WADM)

Ever wrestle with a tough decision? One day you favor option A and the next day you flounder back to option B. Wouldn't it be great if making a tough decision were as simple as picking the higher number?

The second decision tool I use compares and quantifies big decisions. You know them: Should you move or stay? Quit or continue? Go back to college or not? For WADM, you need paper and a pencil. Or alternatively, you can visit HelpMyDecision.com and let the web work the calculation for you. Keep in mind, WADM is for big decisions, so you might use this a few times a year whereas WCCA can be used daily.
