

his or her life. Whether you're paid hourly or annually—it doesn't matter—you can't leverage time!

Consider this. Is 12 a large number? Or 50? Are these numbers predisposed to create millionaires? They aren't, and it exposes why the mathematics of a job are wealth punitive: Your time is limited to small numbers and cannot be leveraged. "Hours worked" or "annual salary" are mathematically inept because they're based on time measurements that cannot be controlled or manipulated. Mathematics doesn't lie; 12 will always be less than 10,000,000. If leverage is limited, so is wealth creation. *Small numbers do not make millionaires.*

Behind limited leverage is another corrosive wealth killer—no control. Can you control your employer? Can you control your salary? Can you control the economy? Can you earn \$50,000 one year and next year bank \$50 million? Can you control anything about your job, including your measly 4% pay raise? You might think you can by job-hopping, but you can't. Control is weak, if not absent.

COMPOUND INTEREST: WHAT "THEY" DON'T TELL YOU

The second variable in the Slowlane wealth equation is the "primary wealth accelerator," which comes from market investments like mutual funds, 401Ks, and other traditional investments touted by gurus and financial advisers. These investments use the financial strategy known as "compound interest," which is a mathematical construct that outlines the power of interest accumulation over great periods of time. The fundamental sell of compound interest is the old guru swan song regurgitated *ad nauseum*: \$10,000 invested today will be worth gazillions in 40 years. Invest \$250 a month for 50 years and you will retire rich! Used correctly, "compound interest" is a powerful ally to wealth; used for Slowlane purposes and it dredges the wealth road trip to a crawl. Why? Again, the puzzle is solved if you exploit the math—the answer plays sibling to why a job won't make you rich: *time*.

Wealth creation via compound interest requires the passing of time and lots of it. Like a job, compound interest, or market investments such as mutual funds and 401Ks, can't be leveraged nor can they be controlled. They rely on deficient math to create wealth.

Inasmuch as the income you make in a job is measured in an hourly rate or an annual salary, the wealth acceleration process of "compound interest" is also measured in time (years) multiplied by a yearly yield. Let's again review the physics, the mathematical formula for the Slowlane pathology to wealth:

$$\text{WEALTH} = (\text{Job}) + (\text{Market Investments})$$

The primary income source

The wealth accelerator
