

Or factored:

$$WEALTH = [\text{Intrinsic Value (Yearly)}] + [\text{Compound Interest (Yearly)}]$$

The primary income source The wealth accelerator

Factored further:

$$WEALTH = (\text{Time} \times \text{Hourly or Salaried Value}) + \text{Invested Sum} \times (1 + \text{Yield})^{time}$$

The primary income source The wealth accelerator

Like a job, the flaw in “compound interest” lies in the same mathematical restrictions in which numbers work AGAINST you instead of FOR you. Take a look at this chart, which highlights the effect of compound interest and that \$10,000 investment.

\$10,000 INVESTMENT				
Time (Years)	Rate of Growth			
	5%	10%	15%	20%
5	\$12,763	\$16,105	\$20,114	\$24,883
10	\$16,289	\$25,937	\$40,456	\$61,917
15	\$20,789	\$41,772	\$81,371	\$154,070
20	\$26,553	\$67,275	\$163,665	\$383,376
25	\$33,864	\$108,347	\$329,190	\$953,962
30	\$43,219	\$174,494	\$662,118	\$2,373,763
35	\$55,160	\$281,024	\$1,331,755	\$5,906,682
40	\$70,400	\$452,593	\$2,678,635	\$14,697,716

A Slowlane guru preaches that a \$10,000 investment grown at 15% will be worth over \$2.5 million dollars in 40 years!!! Hooray!!!

What don't they tell you? They don't tell you that a 15% return year-after-year is impossible unless you invest with Bernie Madoff or Charles Ponzi. They don't tell you that in 40 years you'll be dead, and if you're not, you'll be close. They don't tell you that in 40 years, your \$2.5 million will likely be worth \$250,000 in today's dollars and that a gallon of milk will cost \$12.00. They don't tell you that
