

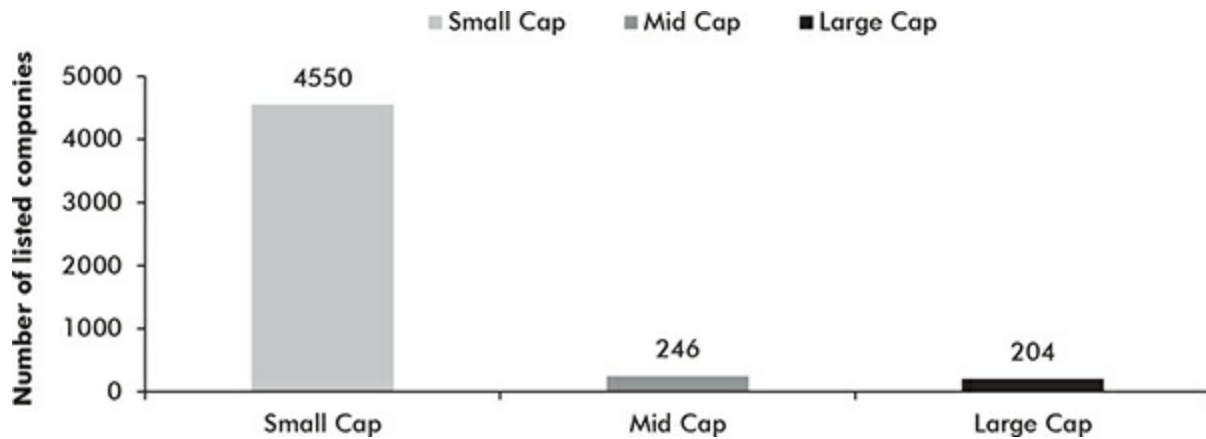

Exhibit 51: The number of companies in the small-cap universe is significantly higher than those in the large-cap and mid-cap universe

Source: Bloomberg, Ambit Capital. Data as of August 2017. Small-cap = Market cap below Rs 3000 crore; Mid-cap = Market cap between Rs 3000 crore and Rs 10,000 crore; Large-cap = Market cap above Rs 10,000 crore.

The drop in the cost of capital helps small-caps disproportionately

In contemporary India, as the cost of capital falls (thanks to the enhanced flow of household savings into the financial system), smaller businesses benefit disproportionately relative to the large, highly reputed household names that dominate the stock market. There are two key reasons for this. First, the cost of capital in India is higher than that of most other emerging markets.
