In economics, a commodity is a marketable item produced to satisfy wants or needs .Economic commodities comprise goods and services.

The more specific meaning of the term commodity is applied to goods only. It is used to describe a class of goods for which there is demand, but which is supplied without qualitative differentiation across a market .A commodity has full or partial fungibility; that is, the market treats its instances as equivalent or nearly so with no regard to who produced them. "From the taste of wheat it is not possible to tell who produced it, a Russian serf, a French peasant or an English capitalist."Petroleum and copper are other examples of such commodities, their supply and demand being a part of one universal market. Items such as stereo systems, on the other hand, have many aspects of product differentiation, such as the brand, the user
