

*Average annual total return*

*The SEC requires that mutual funds report the average annual compounded rates of return for one-, five- and ten year-periods using the following formula:*

$$P(1+T)^n = ERV$$

*Where:*

*P = a hypothetical initial payment of \$1,000*

*T = average annual total return*

*n = number of years*

*ERV = ending redeemable value of a hypothetical \$1,000 payment made at the beginning of the one-, five-, or ten-year periods at the end of the one-, five-, or ten-year periods (or fractional portion)*

***Mutual Funds: Conclusion***
