

Five Steps to Financial Wellbeing

investing your money in things like fossil fuels, tobacco and arms, this might be a good option for you.

When you feel ready, you could look at making yourself a little saving and investment plan. This is something where a financial advisor or coach could be an option, and there are plenty of options for engaging someone to guide you through making financial decisions, including app-based coaching, but if you're feeling connected and confident with your finances, you could create something very simple yourself. Make sure that you look at things such as interest rates, accessibility and fees, to make sure that you're maximizing your return on the investment that you're making in your future.

Actively engaging with your finances to build something positive, rather than just trying to plug holes in your budget, is a really brilliant milestone in your financial wellbeing journey, and should be celebrated. I still remember the feeling of realizing that I had been sustainably saving for a whole year without having to withdraw what I'd set aside, and that I had some real savings for the first time in my adult life – and it felt like I'd won the lottery. But better than that, I knew that I'd been able to do it because I'd made real changes to my relationship with money, and that they were working. If you're feeling ready to focus on providing yourself with some freedom and security in the form of savings and investments, I hope that you feel proud too.
