

more comprehensive list. Just because nobody is telling you directly about the mistakes that they're making, doesn't mean it's not happening. Especially in the UK, we have a tendency to pretend that everything is fine while we're struggling under the surface, and we see being 'good with money' as a key component of successful adulthood. To admit to failings is to admit that we are still, in some ways, a little more juvenile than we pretend to be – and people rarely want to concede that they're not quite there yet.

Mistake-sharing can be such a cathartic and soothing exercise, reducing shame and helping you to break through the barriers that are stopping you from finding solutions.

Learning to trust yourself again

As I've said, struggling to find financial wellbeing doesn't always mean that you've made catastrophic mistakes with money, or that you're experiencing financial difficulty, but it does mean that there's some kind of discord in your relationship with money that is affecting the way that you use it. You might be quite new to managing your personal finances, or have a few years under your belt, and everyone's experiences with money are different. But if you've made mistakes with money, you might find it difficult to trust yourself in the future, especially as successfully managing your finances means making hundreds of decisions, big and small, all the time. In order to achieve financial wellbeing, we have to be comfortable
