

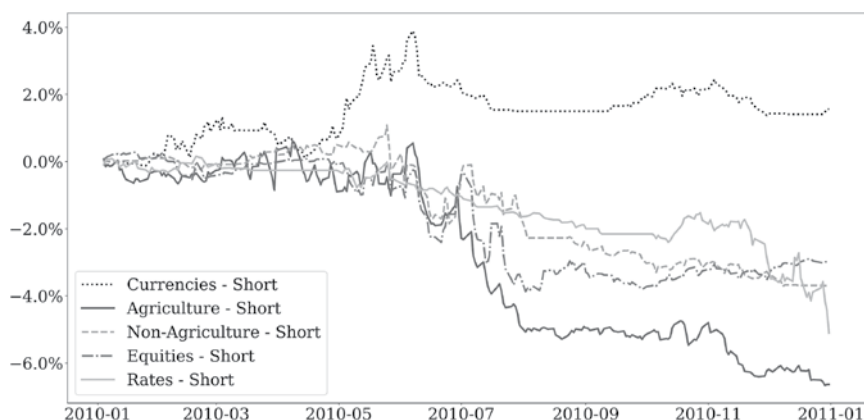

**FIGURE 6.54** Short sector performance 2010.

As is often the case, rescue was just around the corner when we found ourselves in that scary loss. This time it was agriculture that started an impressive rally just after halfway into the year. We entered into the Sugar trend, shown in Figure 6.55 by July and it was a very profitable ride up until the abrupt end of this bull run in October. Even after the sharp drop, there was plenty of profit left and the contribution of this trade as well as the sector was material to the end-of-year results.

We started the year with a US\$56 million portfolio and 30% of that comes to US\$17 million (Tables 6.35 and 6.36). Creating US\$17 million
