

What usually happens is people miss out on growth by waiting too long or jumping in and out at the wrong times.

- **Analysis paralysis.**

A lot of our investors in training get stuck here. You do not want to be stuck in research mode forever. It's a bit like that friend who keeps swiping on dating apps but never meets anyone. You read every article, watch every YouTube video, and listen to every podcast, but you never actually *do* anything. Overthinking leads to inaction, and inaction means your money sits on the sidelines instead of working for you. Go on a date, buy a share.

- **FOMO (Fear of Missing Out).**

When you see people online bragging about their latest crypto win or hear someone at a BBQ sharing their 'hot tip' on the next big thing, it's easy to feel like you're missing out if you're not doing the same. The temptation to jump on the latest trend or follow casual advice from friends or family can be strong, but it's often a fast track to disappointment. Most of these tips are based on hearsay, not solid financial knowledge. Investing isn't about chasing quick wins or following the crowd, it's about sticking to a plan, playing the long game, and making decisions based on what's right for you.

- **Forgetting your own goals and values.**

It's easy to get caught up in what others are doing, especially when it feels like everyone else is making moves. But your money journey is yours. If you lose sight of why you started or what matters to you, you risk making choices that don't align with your life or values. Being unclear on your goals can also mean choosing the wrong investment timeframe or strategy, which can leave you feeling disappointed or exposed to more risk than you're comfortable with.

- **Impatience.**

And finally, impatience. Remember that tree in that forest? Let's call it your money tree. It's not going to grow overnight. Investing takes time. The market will have ups and downs, but the real growth happens over years, not days. Patience is what turns small beginnings into big results.
