## Commodities

Trading volumes in the commodities market are picking up in India as the volatility and attractiveness of returns draws more and more investors.

Commodities magnify the gains and losses of an investor. Commodities prices are seeing a lot of volatility in the recent times. Some of the major categories traded in the markets, their outlook and ways an investor can invest in them are given below.

## Industrial metals

Industrial commodities include aluminium, copper, nickel, zinc, steel, etc. The price movement of industrial commodities depends on the macro-economic factors in the world economy. These commodities do well when investors are confident about consumption demand from large economies like China. Though there is no one-to-one co-relation between commodity prices and commodities stock price movement, if all other things are equal, commodity prices form the most important factor in the pricing of commodities-based stocks.

## Precious metals
