

So, here is the answer. While understanding that investment tools were important for wealth creation, the wealth actually starts to come in big, when you follow the rules governing wealth creation and wealth management. These are also sometimes referred to as Wealth Management Principles. These are time tested principles that build immense wealth for you. Just like natural laws of attraction govern everything else in nature, these wealth management principles govern how wealthy you get and how fast. These principles are simple to understand, and it is sometimes the simplicity of these principles, that may lead us to undermine their importance. As they say, "Small Things make a Big Difference".

Before we start talking about the principles of wealth accumulation, let us go the other way round, over a few facts that define the key traits of really wealthy people:

1. America has millions of millionaires, out of which over 80% are first generation millionaires.
2. 80% of the millionaires who became millionaires through a lottery lost all their money in the next 5 years.
3. The fate of those receiving other windfalls, such as insurance claims, legal settlements, and inheritance is not much better.
4. Most of today's millionaires did not graduate with high honours. They just had fundamental graduate degrees.
5. Most of these millionaires did not even qualify for a top rated college. Warren Buffet, the self made multi-billionaire investor, was rejected by Harvard Business School.
6. Most of the highly qualified, well educated professionals act almost foolishly when it comes to personal finance.

So, if it is not luck or superior intelligence that makes a millionaire, then what does?

What is the common denominator that the wealthy have and the rest of humanity does not. It is simply this: The wealthy understand the principles of wealth accumulation and live by them.

Some, like me, learn these principles through trial and error; some learn it from mentors, parents and coaches, whereas for some, it just comes
