

the inputs before you proceed further, because without these inputs, you cannot proceed much further with financial planning.

Input Description	Value	Get Data From	
Nest Egg Amount	29,000,000	Make a guess to start with	←
Inflation Rate	7%	Avg. inflation for last 5 years	←
Independence Start Year	2024	Make a guess to start with	←
Last Year of Life	2060	Fair judgment	←
Monthly Expense today (at post Freedom venue)	39,400	Step 1 / Monthly Expenses	←
Current Year	2015	Auto Calculated	←
Monthly Expense in 1st year of freedom	82,931	Auto Calculated	←
RoI on your investments (post Freedom)	10%	Step 2 / Assets OR Fair judgment (start lower)	←

Fig 7.6 : Inputs to Nest Egg Calculator

Figure 7.6 is a sample snapshot of the inputs that you will be providing to the Nest Egg Calculator worksheet. In the beginning, some of the values in this table can be a best guess for you but these will be auto tuned (if you are using an Automatic Calculator) or these can be manually tuned (if you are using a Manual Calculator). The steps for manual tuning are detailed out in the Step 3 sheet itself. However, you do not have to do any tuning or calculation for now. As of now, we are just feeding inputs to the first worksheet. We need to feed inputs to two more worksheets after this, before we see the results.

Once you have the above input data for the nest egg calculator, let us proceed to provide the inputs for the second worksheet 'Duration Calculator'.

2. Duration Calculator

The following data points influence the duration taken to reach your target nest egg, and must be entered at this stage:

1. Start point

- You already have the start point. This is the Net Worth that we calculated in Step 2

2. End point
