

approximate expenses would you actually incur if the event was to happen today.

- As an example, your child's marriage may probably occur after 15 years, but assume that if your child was to be married today, how much would you spend on the event.

4. Probable Year of Expense

- This is the most probable year of the said event occurring in your life
- This allows us to extrapolate your expenses (as mentioned in point 3 above) based on the running inflation, and adjust them at an appropriate stage in your financial freedom plan.

5. Inflation

- For most events, you may take the general inflation percentage which you earlier took in Step 3 / Worksheet 1
- However, inflation can vary drastically depending on the industry. E.g. As of writing this revision of the book, the grocery inflation is in the range of 5–6% while the education inflation is easily above 12%.
- If you are aware of specific inflation rates for your special life events, please go ahead and enter those rates here, else use the general inflation rate. Special inflation rates based on the event are not mandatory, though they definitely add more accuracy to your plan.

6. Special Events Amount

- This is auto calculated.
- This is the actual amount that will be adjusted in your financial freedom plan against the specific year when the event is likely to happen.

Figure 7.8 below shows the Special Events table filled in with appropriate sample data.
