

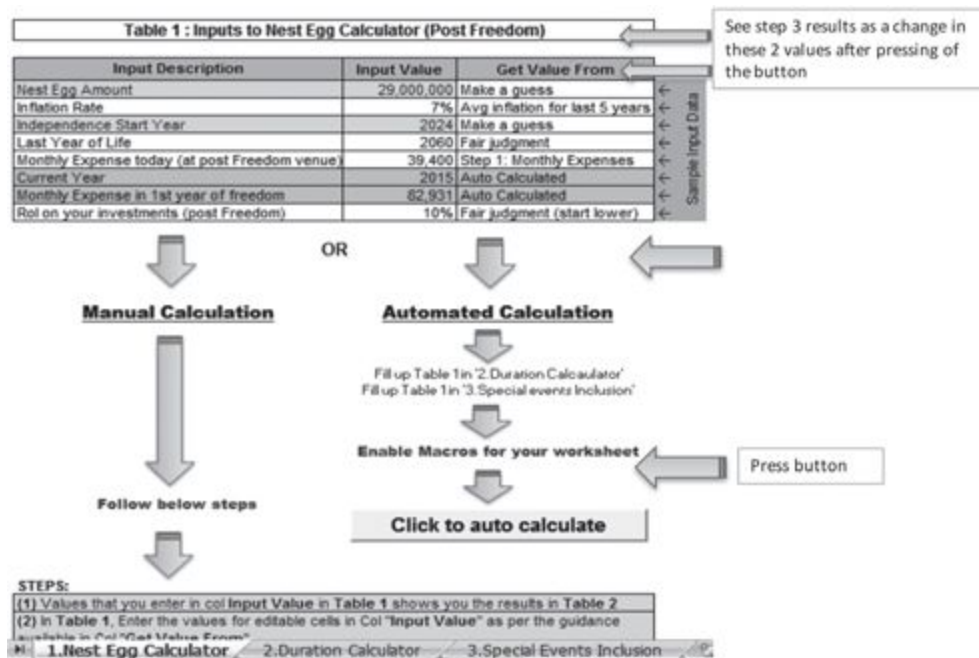

Fig 7.9 : Automated Calculation of Step 3

Option 2 : Manual Option

In case you are unable to run macros for any reason, go ahead and use the manual option for calculation of Step 3 Results.

Each of the three worksheets in Step 3 i.e. Nest Egg Calculator, Duration Calculator and Special Life Events have 'manual steps' defined. These are the same steps which macro performs automatically. Just follow the steps as given in each of the worksheets starting from the first worksheet (Nest Egg Calculator) and then moving onto Worksheet 2 and subsequently Worksheet 3

As you follow the manual steps, you would realise that you may have to spend some time 'tuning' the results data until you arrive at the optimum Nest Egg amount and the duration year. On an average, we have realised that it takes approximately 20–30 minutes to perform the 'manual tuning' activity, toggling between the three worksheets. As you toggle a couple of times, you would realise that the entire tuning process is quite easy.
