

Percentage Achieved Vs Planned (for the last 12 months)

This dashboard shows where you stand on a monthly basis, as compared to your planned nest egg amount for each month. Figure 7.17 shows you the percentage achieved vs planned dashboard for my portfolio.

Any percentage above 100 ensures that you are ahead of the target amount in your nest egg amount at a particular time. The trend shows how you have been performing for the last 12 months.

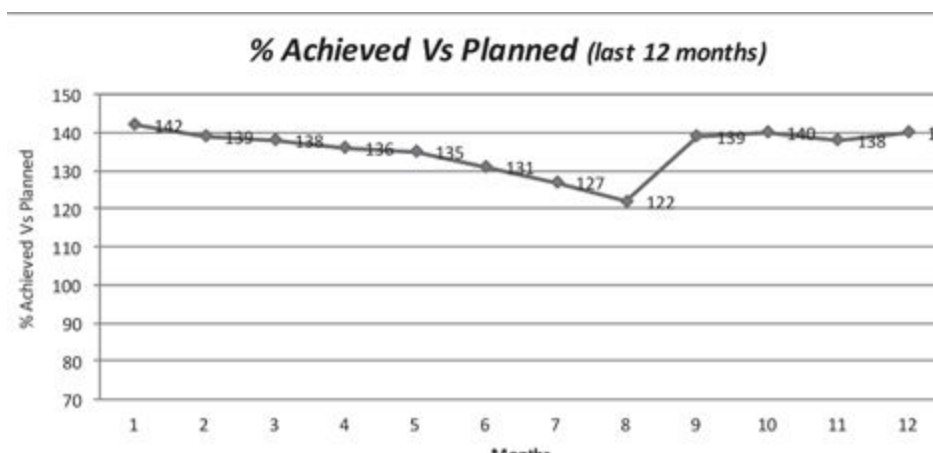

Fig 7.17: *Percentage achieved vs planned*

Figure 7.17 shows that I was around 40% ahead of the plan as far as the nest egg amount was concerned as compared to the total target.

Nest egg (actual and forecast)

This dashboard in the graph of Fig 7.18 shows the accumulated nest egg amount over a period of time. Note that I have a line on this graph showing the trend of my nest accumulation over the next 3–4 years.

You will notice that the nest egg tends to grow very fast in the later years – indicating the immense power of compound interest.
