

What it takes to be a wise investor

Now you know that you need to invest your money, you must also know how and where to invest it wisely so that it not only gives you enough returns to beat inflation but also assures that your basic invested amount is safe and secure.

Let us try and find out what it takes to be a wise investor. What do you think it takes to be a wise investor?

- An MBA degree?
- A sixth sense about timing in the market?
- Years of spending 60 hours a week on Dalal Street or Wall Street?
- Talent – a certain ability that certain people are just born with?
- Luck?

Well, the answer is none of the above.

Anyone, and everyone, can become a wise investor, and that includes you – yes, YOU.

To do so, you need to do only three fundamental things:

1. Learn the basics of investing
2. Execute these basics
3. Stick to the basics, continue sticking – for weeks, months, years and even decades, if needed. That is the discipline that will take you to freedom

Once you learn the basics, you will always be able to handle the financial part of your life and the reason for that is very simple. The reason is that the economy changes, our needs and goals change, the market changes, but the basic strategies of money investments always remain the same. You have to just learn them once.

Investing is a life long commitment. It is not a game. It is about the things that matter most to you. I had to learn it from scratch for the sake of my freedom. You can do it too.
