

saw the secretary only at her desk, in the ordinary course of business.

She had been the support of her family since her father had died while she was quite young. She now had been associated with two generations of the family that owned the business, she had a responsible position, and she was quite happy in her work. Between family responsibilities—she helped to educate her younger sisters—and the demands of holding down an executive job, she was very busy. She had given little thought to marriage; one might say it was the last thing on her mind.

And now perhaps a little pagan cherub with a bow and arrow smiled over my shoulder. Now and then I invited the secretary to join me for dinner. Now and again we went to a show in one of the nearby towns. I found out that the moment she got away from family and office matters, she had quite a different personality. A wonderful personality.

That woman was almost a perfect duplicate of the greatest woman I ever had known—my stepmother. No wonder I admired her! The picture began to develop rapidly. We took motor trips. On Sunday mornings we listened together to the Mormon Tabernacle radio services while we were driving in the country.

The Law of Compensation works in ways that are strange and unpredictable. I parted from this woman who attracted me so deeply.

First of all—the pattern again—I lost my publisher. The attack on Pearl Harbor and the events that followed affected my publisher's affairs so strongly that he brought our arrangement to an abrupt end.

Then I left town. This event arose from the telephone call from the LeTourneau Company which I have related, and I took over that important public relations assignment at their plant in Georgia.

There I was destined to meet the greatest opportunity of my life to demonstrate the soundness of my Philosophy as a builder of harmonious relations between employees and employer. With all modesty I can say that my influence in that plant, with its two thousand employees, changed everyone for the better, including top management. Later I read that the war in the Pacific depended heavily for its success on U.S. ability to move quantities of earth and rock in building air-strips on occupied islands. LeTourneau earth-moving machi-
