

the power that kept me going—but I had my mind upon my goal, not upon obstacles, and I kept going. This first practical Science of Personal Achievement has earned more money for its users than was contained in Andrew Carnegie's entire fortune—and he was very likely the world's richest man.

It is one thing to listen to advice from a person qualified to give advice. It is quite another to allow adverse criticism to blunt the fine edge of your own conquering mind. Notice how much of such criticism comes from people who criticize everything—in particular, from people who criticize everybody who tries to succeed. Failure, like other forms of misery, loves company. *Cast out fear of criticism and drive ahead.*

3. The fear of ill health. Probably you know more than one person whose main topic of conversation is health—or rather, ill health.

Such people would rather describe their operations than talk of the benefit they derived—if indeed they needed the operations in the first place. They start each day by searching for symptoms, first from the hair down and then from the toes up, and will find many a “sure sign” of illness with which to bore their friends. They buy every quack remedy that comes along, follow every health fad one year which turns out to be an anti-health fad the next year. They are hypochondriacs; they imagine illness, fear illness, and literally bring illness upon themselves—for such is the *negative power* of the mind.

In my sixty-odd years of adulthood I have been gratified to see that physicians give increasing attention to psychosomatic illness, or bodily illness which originates in the mind. Since man's earliest history, however, it has been obvious that almost all of our illness is caused by *un-peace* of mind. Here is a very partial list of symptoms which can arise from mental conflicts, fears, and tensions:

Headache	Circulatory trouble
Indigestion	Frigidity
Ulcers	Impotence
Arthritic pains	Rashes, other skin afflictions
Constant fatigue	Mouth infection
Sleeplessness	Rectal disorders
Slow healing of wounds	Muscular cramps
Kidney trouble	... and more ... and more ...
