

polluting companies can sell their quota to other companies, so cleaner industries are rewarded, while polluting industries pay more.

COLLECTIVE ACTION

The problems of pollution, climate change, and depletion of resources are not limited to single countries, and do not recognize national borders. The solutions have to be economic, but need political will to enforce them. Measures to reduce consumption and to regulate industries must be adopted globally, so it's vital that there is international cooperation.

The population of the world increased by 1 billion people, up to 7.3 billion, in the 12 years from 2003 to 2015.
