

PENSION CONTRIBUTIONS

Calculations by a British consumer association reveal that to achieve an annual pension income of \$15,000 by age 68, savers starting at age 25 need to save \$165 a month. Starting at 35 would mean having to save \$215 a month.

A professional financial advisor can calculate exactly how much an individual needs to save to meet their retirement goals, and offer advice on the different types of pensions and investments available.

50% of one's age
when starting to save is
the percentage of salary
to save for retirement.
