

Guyton and Klinger's Decision Rules	4.00%	90th	\$5,320	\$7,970	\$8,730	\$223,940	118%	118%	0%
		50th	\$4,000	\$4,300	\$4,660	\$126,180	17%	17%	-1%
		10th	\$2,770	\$2,590	\$3,070	\$86,690	-23%	-23%	-2%
Zolt's Glide Path Spending Rule	4.00%	90th	\$4,000	\$4,000	\$4,000	\$364,000	0%	0%	0%
		50th	\$3,750	\$3,540	\$3,530	\$154,540	-12%	-12%	-1%
		10th	\$2,740	\$2,360	\$2,360	\$87,600	-41%	-41%	-1%
Modified RMD Rule (Spending Rate = $1.24 \times$ RMD %)	4.00%	90th	\$7,490	\$11,610	\$10,170	\$70,160	154%	154%	-4%
		50th	\$5,200	\$6,670	\$6,290	\$41,630	57%	57%	-5%
		10th	\$3,210	\$3,640	\$4,260	\$30,280	6%	6%	-7%

As you can see, the constant inflation-adjusted spending rule creates the smallest range for spending adjustments and the largest range for remaining wealth after thirty years. From a retirement date portfolio of \$100,000, spending remains constant across the distribution over time at \$4,000. The range of remaining wealth after thirty years is \$27,830 at the tenth percentile and \$322,310 at the ninetieth percentile. At the median, wealth has grown to \$127,010 in real terms. If spending stays constant, and this is the baseline strategy, the remaining measures about the direction of spending, spending relative to the baseline, and spending volatility are all 0 percent.

As for other strategies, we can discuss them in terms of the trends for each of the measures. Regarding how spending evolves over time, spending can reach the highest levels at the ninetieth percentile with the modified RMD rule, the Kitces ratcheting rule, Guyton and Klinger's decision rules, and the fixed-percentage rule. As for the median level of spending after thirty years, spending is the highest with the Kitces ratcheting rule, the modified RMD rule, and the fixed-percentage rule. At the tenth percentile, spending after thirty years is the highest with the modified RMD rule, constant inflation-adjusted spending, and the Kitces ratcheting rule. The Vanguard floor-and-ceiling and Zolt glide path rules lead to the lowest levels of spending after thirty years.

Remaining wealth after thirty years is the highest at the ninetieth percentile for constant inflation-adjusted spending and Zolt's glide path rule. These
