

may struggle to stay the course with a total-returns investing approach, the appealing logic of time segmentation could help them maintain better investment discipline in retirement. While time segmentation by itself may not provide a superior investing strategy when compared to a total-returns approach with matching dynamic asset allocation, it is a viable strategy deserving of its place in the retirement income toolkit. Retirees must understand, however, that its implementation will mean dynamic asset allocations and that a clear rule must be implemented for when to extend the bond ladder during retirement.
