

Next Steps for the RIO Questionnaire Results and the RIO-Map™

Especially for retirement income funding, the RIO Questionnaire provides a beginning of the journey rather than the destination. More work is to be done. The RIO-Map is not just used at the start of the journey, but it is a continuing reference point that shifts as your priorities, needs, and desires evolve over time.

Scoring the RIO Questionnaire

After you complete the RIO Questionnaire, we will analyze your answers to determine where you stand with respect to various aspects of retirement income planning. As a part of this, we first apply sensitivity filters to your answers. It is possible for two households to answer their RIO-Map questions in a similar manner but still have different scores, strengths, weaknesses, and RIO-Maps. This is because we apply sensitivities such as your goal priorities, age, marital status, proximity to retirement, and other factors to ensure your map is specific to you. Your score will depend on the various milestones in your life. As a quick example, someone who is fifty-five will have different views toward Social Security than someone who is sixty-one, and that should be reflected in your scoring.

Your RIO numerical scores generally translate into one of three outcomes. For a given tactic or risk, you either are on track, have the potential for improvement, or can otherwise rule out the issue or option as not being applicable to your situation. For instance, if you do not have a traditional company pension, you would receive a low score for the tactic, but we would be clear that this just is not an option for your case. Nonetheless, without a company pension, it would be important to further consider other sources of reliable income.

After applying the sensitivity filters, we are able to score each subsection individually and then combine them to find your retirement income optimization score for each section. Because we take into account your personal situation, objectives, implementation, and knowledge of these topics, we are able to determine the values for each question in a manner that
