

Exhibit 8.4

RIO Strengths and RIO Weaknesses

Once we have identified your strengths and weaknesses, we are ready to start quantifying and building your plan of action. This action plan is your 180-day plan.

Funded Ratio

For a plan of action, we start with the funded ratio, which is used to quantify the actual monetary value and costs of your goals, assets, and liabilities. This sets the size of the boxes on your RIO-Map, and it sets the stage for moving into the retirement income funding analysis by quantifying any gaps between the related asset and liability components in the map. The purpose of the funded ratio is to determine, on a lifetime basis, whether the retirement assets are large enough to meet the retirement liabilities. This also helps match the reality of whether your assets are sufficient to meet your retirement goals.
