

million-dollar result is that Paris only put in \$144,000 of her own money over the 40 years. The rest of that money is from beautiful compound interest and her employer's match. Finally, if you want to have a very comfortable retirement, look no further than Strategy D. If Paris contributes \$1,000 per month for 40 years, she ends up making just under \$3 million.

One of the biggest problems for Americans, myself included, is that they do not learn these things when they are young. This makes saving and investing more difficult, because you have less time for compound interest to grow your money. If you get started early, you can get the power of compound interest on your side.
